VIVAHA ATELIER

LUXURY WEDDING INVITATION MARKETING SITE

Business Requirements Document

A marketing site for a luxury wedding invitation brand, built to turn browsing into enquiries.

Document Vivaha-BRD-001

Version v1.0

Author Irham Saleha

Prepared for Vivaha Atelier project documentation

1. EXECUTIVE SUMMARY

A catalogue brand needs its product range to feel considered on every screen size, and needs an enquiry to be one short form away from any point on the page. Vivaha Atelier replaces an unstructured social-media enquiry funnel with a fully responsive site that presents the catalogue with intent and captures every enquiry with the detail needed to quote against it on the first reply.

2. BUSINESS OBJECTIVES

- Convert browsing into qualified enquiries that carry enough detail to quote against without a second exchange.
- Present a printed product convincingly on a phone screen, where most of the audience first encounters the brand.
- Let the studio update the catalogue without a developer, so new designs reach the site in the season they were made.

3. STAKEHOLDERS

Stakeholder	Interest
Couple or planner	Judge quality quickly, compare styles, ask a question without filling in a long form.
Studio owner	Enquiries with contact details, event date and a described requirement.
Studio staff	Catalogue content that can be changed without touching markup.

4. CURRENT STATE

Enquiries arrive through social messages with no structure: no event date, no quantity, often no name. Each one costs several exchanges before a quote is possible, and the range is only visible as a scattered feed rather than a catalogue.

5. SCOPE

In scope

- Catalogue presentation, gallery, testimonials, enquiry capture, newsletter capture, direct WhatsApp contact.

Out of scope

- Online ordering, payments, customer accounts, inventory, printing workflow.

6. BUSINESS REQUIREMENTS

- BR-1 — Every enquiry submission must capture contact details, event date and a described requirement in one step.
- BR-2 — The full catalogue must be navigable and legible on a mid-range phone over a weak connection.

- BR-3 — Adding or updating a category or product must require a content edit only, never a markup or deployment change.
- BR-4 — A visitor must be able to reach the enquiry form from any section of the page without excessive scrolling.
- BR-5 — Direct contact via WhatsApp must remain available as an alternative to the enquiry form at every scroll position.

7. SUCCESS METRICS

- Share of enquiries arriving complete enough to quote from on the first reply.
- Enquiries per hundred sessions, measured separately for mobile and desktop.
- Time for staff to publish a new category, measured in minutes rather than days.

8. ASSUMPTIONS & CONSTRAINTS

- Traffic is predominantly mobile and often on a weak connection; page weight is a business constraint, not a technical preference.
- Photography is supplied by the studio and is the primary sales asset — the interface must stay subordinate to it.
- No back office in this phase; catalogue content lives in structured data files.

9. RISK REGISTER

Risk	Mitigation
Heavy imagery slows first paint and loses mobile visitors.	Responsive image sizes and deferred loading below the fold.
A long single page can bury the enquiry path.	Persistent contact controls and scrollspy navigation keep it reachable.
Content edits made incorrectly break page rendering.	Catalogue content is isolated in structured data files, separate from markup.

10. ROADMAP

- **Shipped** — responsive catalogue, mega-menu and scrollspy navigation, gallery, testimonials, enquiry and newsletter forms, WhatsApp integration.
- **Next** — lightweight CMS for catalogue content, enquiry status tracking for the studio.
- **Later** — seasonal lookbooks, multi-language catalogue, sample-request workflow.
