VIVAHA ATELIER

LUXURY WEDDING INVITATION MARKETING SITE

Product Requirements Document

Scope, users, functional and non-functional specifications for the Vivaha Atelier marketing site.

Document Vivaha-PRD-001

Version v1.0

Author Irham Saleha

Prepared for Vivaha Atelier project documentation

1. SCOPE

A marketing and enquiry site. No cart, no payments, no accounts — adding them would slow the page and serve nobody at this stage of the business. This document specifies the product behaviour required to satisfy the business requirements in Vivaha-BRD-001.

2. USERS

Role	Needs
Visitor	See the range quickly, judge quality from photographs, ask a question without friction.
Business owner	Receive enquiries with enough context to reply once and quote.

3. USER STORIES & ACCEPTANCE CRITERIA

Visitor

As a visitor, I want to browse the catalogue by category, so that I can find a style that matches my event.

- Given the homepage, when a category is selected, then matching products render with photography and pricing context.
- Given a product card, when tapped, then a full-size image opens in the lightbox without leaving the page.

As a visitor, I want to send an enquiry in one step, so that I get a useful reply without back-and-forth.

- Given the enquiry form, when submitted with contact details, event date and requirement, then a confirmation is shown and the studio receives the complete submission.
- Given a required field is missing or invalid, when submit is attempted, then an inline, field-specific error is shown and nothing is sent.

Business owner

As the studio owner, I want every enquiry to include an event date and requirement, so that I can quote without a second exchange.

- Given a submitted enquiry, then it always contains name, contact detail, event date and a free-text requirement.

As studio staff, I want to update the catalogue without touching markup, so that new designs go live the same season they are made.

- Given a new product added to the category data object, when the page is rebuilt, then it appears in the catalogue with no other code change.

4. FUNCTIONAL REQUIREMENTS

- Render categories, products, gallery and testimonials from data objects, so a content change never touches markup.
- Mega-menu and scrollspy navigation keeping the visitor’s position legible on a long page.

- Image lightbox for full-size product photography.
- Auto-rotating testimonial carousel that pauses on interaction.
- Validated enquiry and newsletter forms with inline, specific error messages.
- WhatsApp and back-to-top controls persistent on scroll.

5. NON-FUNCTIONAL REQUIREMENTS

- Full responsiveness is a requirement, not a pass at the end — most traffic is mobile.
- Images must not block first paint; the page has to feel fast on a mid-range phone.
- Motion respects reduced-motion preferences.

6. MVP CUT

Catalogue rendering, gallery, enquiry form and WhatsApp. The carousel and animated counters were added once the core path worked.

7. SUCCESS CONDITIONS

- An enquiry can be submitted within three interactions from any section.
- A category can be added by editing one data object and nothing else.

8. OUT OF SCOPE / FUTURE WORK

- A lightweight CMS for catalogue content.
- Enquiry status tracking for the studio.
- Seasonal lookbooks, multi-language catalogue, sample-request workflow.
